16. Transit (Gochar) triggers
17. Remedial suggestions
18. The standalone browser edition
19. Worked example & reproducibility
20. Parameter influence — master summary
21. Limitations & disclaimer

1. Purpose & scope

The utility advises on the **right education field** and the **right career field** (for both *earning* and *satisfaction*), and answers the questions most commonly put to an astrologer, each with a **timeline**. It deliberately fuses **two independent astrological systems** so the advice reflects agreement (or disagreement) between them:

- **KP (Krishnamurti Paddhati)** — a precise, sub-lord-driven system used here mainly for the *promise* of a result and its *timing*.
- **Parashara (classical Vedic)** — used for *dignity, yogas, divisional charts* and *planetary strength (Shadbala)*.

Every result is **derived from the birth chart by deterministic rules** (no machine learning, no randomness). The same birth data always produces the same output.

2. System architecture

Birth data (date, time, lat, lon, tz)

ephemeris.py two Chart objects: KP chart + Parashara chart

dasha.py 3-level Vimshottari tree (from the Moon)

kp.py significators, cuspal sub-lords (KP chart)

parashara.py dignities, yogas, vargas (Parashara chart)

varga.py divisional-chart geometry (D-2 ... D-30)

shadbala.py six-fold strength + Bhava Bala + Ishta/Kashta

advice.py fuses KP + Parashara + Shadbala into ranked field advice

faq.py FAQ answers with dasha windows

remedies.py / transits.py

adviser.py AdviceReport (orchestrator) + JSON serialization

app.py FastAPI web app + JSON API + usage counter

docs/index.html self-contained browser edition (JS port)

Module	Responsibility
<code>constants.py</code>	All reference data: planets, signs & lords, 27 nakshatras, Vimshottari years, dignities, karakas, house groups, field planet mappings
<code>ephemeris.py</code>	Swiss-Ephemeris chart, sub-lord computation, Placidus cusps, speed & declination
<code>dasha.py</code>	3-level Vimshottari dasha, running-period lookup, fructification scan
<code>kp.py</code>	KP four-step significators, houses-signified, cuspal sub-lord (CSL) judgement
<code>parashara.py</code>	Dignity/strength, house-lord placement, yogas, D-9/D-10/D-24 analysis
<code>varga.py</code>	Divisional-sign formulae and the <code>VargaChart</code> builder
<code>shadbala.py</code>	Six balas, Bhava Bala, Ishta/Kashta phala, strength factors
<code>advice.py</code>	Combines all of the above into ranked education/career recommendations
<code>faq.py</code>	The 11 FAQs with KP-promise + dasha timeline
<code>remedies.py</code>	Upaya for weak/afflicted key planets
<code>transits.py</code>	Slow-planet transit triggers, double-transit, Sade Sati
<code>adviser.py</code>	Orchestrates everything; best-periods overlay; age awareness; JSON

3. Astronomical foundation

Item	Choice	Why it matters
Ephemeris	Swiss Ephemeris (<code>pyswisseph</code>), Moshier model (<code>FLG_MOSEPH</code>)	Sub-arc-minute planetary positions with no external data files
Zodiac	Sidereal (<code>FLG_SIDEREAL</code>)	Vedic astrology is sidereal (fixed-star based), not tropical
Nodes	True Node for Rahu; Ketu = Rahu + 180°	KP/Parashara conventionally use the lunar nodes
Speed	Longitude speed (deg/day) captured per planet	Drives Cheshta Bala & retrograde detection
Declination	Equatorial declination (<code>FLG_EQUATORIAL</code>)	Drives Ayana Bala

Ayanamsa (the sidereal–tropical offset) is system-specific:

- **KP chart** **Krishnamurti ayanamsa** (`SIDM_KRISHNAMURTI`)
- **Parashara chart** **Lahiri ayanamsa** (`SIDM_LAHIRI`)

The two differ by only 6 arc-minutes, but that is enough to occasionally move a **sub-lord** across a boundary — which is exactly why KP needs its own ayanamsa.

Time handling. Local birth time is converted to UTC using the timezone offset, then to a Julian Day. The web/standalone front-ends capture the **DST-aware** offset automatically from the city's IANA timezone.

4. The two reference frames: KP and Parashara charts

`compute_chart(...)` is called twice and returns two independent `Chart` objects:

	KP chart	Parashara chart
Ayanamsa	Krishnamurti	Lahiri
Houses	Placidus cusps (unequal, real cusp degrees)	Whole-sign (house = sign from the ascendant)
Used for	Significators, cuspal sub-lords , timing	Dignity, yogas, vargas, Shadbala

Placidus cusps are computed by Swiss Ephemeris (`houses_ex(..., b"P")`). They give each of the 12 house cusps an exact degree, which KP needs because the **sub-lord of the cusp degree** is the deciding factor. The MC (10th cusp) is also stored for **Dig Bala**.

Each planet record carries: sidereal longitude, sign, house, retrograde flag, **speed**, **declination**, and the full **lordship chain** (below).

5. Lordship chain & KP sub-lords

Every longitude is decomposed into a chain used throughout the engine:

longitude Sign (lord) Nakshatra (star lord) Sub-lord Sub-sub-lord

- **Sign lord** — ruler of the 30° sign.
- **Nakshatra / star lord** — ruler of the 13°20′ lunar mansion (one of the 9 Vimshottari lords).

- **Sub-lord** — the nakshatra span is divided into **9 unequal parts proportional to the Vimshottari dasha years** (Ketu 7, Venus 20, Sun 6, ...), starting from the star lord. The part the longitude falls in gives the sub-lord.
- **Sub-sub-lord** — the same proportional division applied again *inside* the sub.

This proportional sub-division (`_subdivide`) is the mathematical heart of KP. **The sub-lord is considered the final deciding authority** over the matters a planet/cusp signifies.

6. Vimshottari Dasha (3-level timing engine)

The Vimshottari dasha is the project's clock. It is anchored on the **Moon's nakshatra at birth**.

- **Cycle:** 120 years, in the fixed order Ketu 7 Venus 20 Sun 6 Moon 10 Mars 7 Rahu 18 Jupiter 16 Saturn 19 Mercury 17.
- **Balance at birth:** how far the Moon has travelled through its nakshatra fixes the remaining fraction of the first Mahadasha.
- **Three levels are built:**
 - **Mahadasha (MD)** — major period.
 - **Antardasha (AD / Bhukti)** — $\text{MD_years} \times \text{AD_years} / 120$.
 - **Pratyantardasha (PD)** — $\text{AD_years} \times \text{PD_years} / 120$.
- A "year" = **365.25 days**.

`find_running(tree, when)` returns the MD/AD/PD active on any date. `fructification_windows(...)` scans the tree for periods where the running lords are the **significators** of a set of houses — this is how every timeline in the app is produced (see §7).

7. KP analysis — significators & cuspal sub-lords

7.1 Four-step significators of a house

For any house H, planets are graded (strongest first):

Grade	Rule	Meaning
A	Planets in the star (nakshatra) of an occupant of H	Strongest signification
B	Occupants of H	Strong
C	Planets in the star of the lord of H	Moderate
D	The lord of H	Present but weakest

Nodes (Rahu/Ketu) occupying a house are added as strong significators, and a node represents (in priority) its **conjoined planets** **star lord** **sign lord**.

7.2 Houses signified by a planet

A planet signifies the houses **occupied and owned by its star lord** (strongest), plus the house it occupies and the houses it owns. This is what `houses_signified_by` returns and is reused for cuspal-sub-lord judgement.

7.3 Cuspal Sub-Lord (CSL) — the decider

In KP, **whether a matter happens at all** is decided by the **sub-lord of the relevant house cusp**. The engine asks: *does the CSL signify the positive houses for this matter, and avoid the negative ones?*

Matter	Cusps examined	Positive houses	Cautionary houses
Education	4, 5, 9, 11	4, 5, 9, 11	3, 8, 12
Higher education	9 & 11	9, 11, 4, 5	8, 12, 3
Career (promise)	10, 6, 2, 11	2, 6, 10, 11	5, 8, 12
Job vs business	10 & 6 CSL links	6 job, 7 business	—

A house's matter is judged **favorable** when its CSL signifies 1 positive house and at least as many positive as cautionary houses. Education is "promised" when 2 of the four CSLs are favorable; the same threshold applies to career.

7.4 Strong signifiers (for timing)

`strong_signifiers(houses)` = grade A/B signifiers **plus** the cuspal sub-lords of those houses. These focused planets are what the dasha scan looks for when timing an event (§14, §15).

8. Parashara analysis — dignities, house lords, yogas

8.1 Planetary dignity (a 0–1 strength score)

State	Score	Example
Exalted	1.00	Jupiter in Cancer
Moolatrikona	0.90	Mars in Aries
Own sign	0.85	Mercury in Gemini
Friendly sign	0.65	—
Neutral sign	0.50	—
Enemy sign	0.30	—
Debilitated	0.10	Mercury in Pisces

Friendship uses the natural-relationship table; nodes act through their dispositor (0.5).

8.2 House-lord placement

For the education houses (2, 4, 5, 9) and career houses (2, 6, 7, 10, 11), the engine records **which house and sign each lord occupies** and its dignity. Lords falling in supportive houses (kendras 1/4/7/10, trikonas 1/5/9, plus 2 & 11) strengthen the matter.

8.3 Yogas detected

Yoga	Condition	Bearing
Budha-Aditya	Sun + Mercury together	Intellect, communication
Gaja-Kesari	Jupiter in a kendra from the Moon	Wisdom, repute
Saraswati	Mercury, Jupiter, Venus in kendra/trikona/2nd	Learning, arts, eloquence
Pancha-Mahapurusha (Ruchaka/Bhadra/Hamsa/Malavya/Sasa)	A planet exalted/own in a kendra	Leadership in its domain
Dhana	2nd/11th lords linked to 2/5/9/10/11	Earning
Raja	A kendra lord conjoined a trikona lord	Rise in status

Education uses Saraswati / Budha-Aditya / Gaja-Kesari; career uses Raja / Dhana / Mahapurusha.

9. Divisional charts (Vargas)

Divisional charts refine the rasi (D-1). Each is built by `build_varga` with **whole-sign houses from the divisional ascendant**.

Varga	Name	Role in this app
D-9	Navamsa	Overall strength; vargottama = same sign in D-1 & D-9 (extra strong)
D-10	Dasamsa	Career varga — its 10th house/lord & occupants describe the profession
D-24	Chaturvimsamsa (Siddhamsa)	Education varga — Mercury/Jupiter & the learning houses (1/4/5/9) gauge academic capacity
D-2, D-3, D-7, D-12, D-30	Hora, Drekkana, Saptamsa, Dwadasamsa, Trimsamsa	Used inside Saptavargaja Bala (§10)

Each varga analysis produces a **strength score (0–1)** and a set of **field planets** that are fed, weighted by that strength, into the recommendation engine.

10. Shadbala — six-fold planetary strength

Shadbala is computed for the **seven classical grahas** (Sun...Saturn) on the Parashara chart. Strengths are in **virupas** (60 virupas = 1 **rupa**). The six balas:

10.1 Sthana Bala (positional)

Component	How computed	Max
Uccha	Angular distance from the planet's debilitation point ÷ 3 (0 at debilitation, 60 at exaltation)	60
Saptavargaja	Dignity across 7 Vargas (D-1,2,3,7,9,12,30) via compound friendship: Moolatrikona 45 / Own 30 / Great-friend 22.5 / Friend 15 / Neutral 7.5 / Enemy 3.75 / Great-enemy 1.875	315
Ojhayugma	Correct odd/even sign in Rasi & Navamsa (15 each)	30
Kendradi	Kendra 60 / Panaphara 30 / Apoklima 15	60
Drekkana	Male planets in 1st decanate, neuters in 2nd, females in 3rd 15	15

10.2 Dig Bala (directional)

Each planet is strong in one cardinal house and powerless in the opposite. Dig Bala = angular distance from the "powerless point" ÷ 3.

Strong in	Powerless at	Planets
10th (MC)	4th (Nadir)	Sun, Mars
4th (Nadir)	10th (MC)	Moon, Venus
1st (Asc)	7th (Desc)	Jupiter, Mercury
7th (Desc)	1st (Asc)	Saturn

10.3 Kala Bala (temporal)

Sub-bala	Basis	Note
Nathonnatha	Sun's hour angle (day vs night strength)	Mercury always 60
Paksha	Moon-Sun elongation (benefics wax-strong, malefics dark-strong)	Moon's value doubled
Tribhaga	Ruler of the current third of day/night	Jupiter always 60
Vara	Lord of the weekday of birth	+45
Hora	Lord of the planetary hour (Chaldean order from sunrise)	+60
Masa / Abda	Weekday lord of the solar month / year ingress (found by ephemeris search)	+30 / +15
Ayana	Declination: $1.2766 \times (23.45 \pm \delta)$; north-preferring planets add δ , Moon/Saturn subtract	uses declination

10.4 Cheshta Bala (motional — speed & direction)

Planet	Rule
Sun	= its Ayana Bala
Moon	= its Paksha Bala
Mars... Saturn	Retrograde 60 (max); otherwise scaled by slowness $(1.5 - \text{speed}/\text{mean})/1.5 \times 60$ (slow/near-stationary scores high, fast-direct low)

This is precisely where **motion speed and direction enter the strength model** — a retrograde or near-stationary planet is treated as motionally powerful.

10.5 Naisargika (natural, fixed)

Sun 60, Moon 51.43, Venus 42.86, Jupiter 34.29, Mercury 25.71, Mars 17.14, Saturn 8.57.

10.6 Drik Bala (aspectual)

Benefic full/special aspects on the planet add +15, malefic -15, divided by 4.

10.7 Total, sufficiency, and Ishta/Kashta

```
total_virupa = Sthana + Dig + Kala + Cheshta + Naisargika + Drik
rupas       = total_virupa / 60
ratio       = rupas / required    (required: Su 6.5, Mo 6, Ma 5, Me 7, Ju 6.5, Ve 5.5, Sa 5)
sufficient  = rupas  required
Ishta phala = (Uccha × Cheshta)   (capacity to give GOOD results)
Kashta phala = ((60-Uccha) × (60-Cheshta)) (capacity to give DIFFICULT results)
benefic     = Ishta  Kashta
```

10.8 Strength factor (how Shadbala influences advice)

```
strength_factor = clamp( 0.6 + 0.6 × min(ratio,1.6)/1.6 (+0.1 if benefic) (+0.05 if retrograde), 0.6 ... 1.4 )
```

Every planet's contribution to a recommendation is **multiplied by this 0.6–1.4 factor** — so a strong, Ishta planet pulls its fields up and a weak/Kashta planet is discounted.

11. Bhava Bala & Ishta/Kashta phala

Bhava Bala (house strength) = $\text{Bhavadhipati (Shadbala of the house lord, virupa)}$ + $0.10 \times \Sigma(\text{Shadbala of occupants})$ + $\text{net aspect (benefic +20 / malefic -20)}$, expressed in rupas and labelled *weak / moderate / strong / very strong*. The education group (4/5/9) and career group (2/10/11) are summarised in the assessment.

Dasha-phala timeline — each upcoming Mahadasha (and the current MD's Antardashas) is labelled from its lord's Ishta/Kashta:

Verdict	Condition
Strongly benefic	Ishta Kashta and Ishta 40
Benefic / supportive	Ishta Kashta
Challenging	Kashta - Ishta > 15
Mixed	otherwise
Variable	node (no Shadbala)

12. Education assessment — parameters & influence

`advise_education(kp_chart, par_chart, shadbala)` combines four weighted streams of "field planets".

12.1 What is collected and how it is weighted

Source	Weight	Where it comes from
KP field planets (significators of 4 & 5)	1.0	<code>kp.judge_education</code>
KP significators of 4, 5, 9, 11 (top 4)	0.6	<code>kp.judge_education</code>
Parashara field planets (Mercury/Jupiter karakas + 4th/5th lords)	1.0	<code>parashara.judge_education</code>
D-24 education-varga indicators	$0.6 + 0.6 \times \text{D24-strength}$	<code>parashara.analyse_siddhamsa</code>

Within each list, the n -th planet gets a small positional bonus $\times (1 - 0.12n)$. Then **every planet score is multiplied by its Shadbala strength factor** (§10.8).

12.2 From planets to streams

Each scored planet is expanded into the **education streams it governs** (e.g. Mercury IT, commerce, accountancy, journalism; Jupiter law, economics, teaching, finance). The 4th-house **sign** adds a light temperament nudge (+0.4) to matching streams. The top 6 streams are returned.

12.3 Verdicts

- **Education promised** — from the KP CSL test on 4/5/9/11 (§7.3).
- **Higher education likely** — KP 9th & 11th CSLs both favorable.
- **Academic strength** — $0.65 \times \text{Parashara education score} + 0.35 \times (\text{Shadbala of Mercury \& Jupiter, capped})$
Strong / Above average / Moderate.

12.4 Influence summary

Parameter	Effect on the result
KP CSL of 4/5/9/11	Decides whether education (and higher education) is promised
KP significators of 4/5	Push their streams up the ranking
Mercury & Jupiter dignity + Shadbala	Set academic strength ; weak ones trigger a remedy note
4th/5th lords	Add their streams; placement affects strength
D-24 strength & field planets	Reinforce streams in proportion to divisional strength
Shadbala strength factor	Re-weights every planet (0.6–1.4×)
4th-house sign	Light temperament nudge to matching streams

13. Career assessment — parameters & influence

`advise_career(kp_chart, par_chart, shadbala)` mirrors education but on the career houses.

13.1 Field-planet sources & weights

Source	Weight
KP field planets (significators of 10 & 6)	1.0
KP significators of 2, 6, 10, 11 (top 4)	0.6
Parashara field planets (planets in 10th + 10th lord + strongest karaka)	1.1
D-10 career-varga indicators	0.7 + 0.7 × D10-strength

Again positional bonus $\times (1 - 0.12 n)$, then $\times$ Shadbala strength factor; expanded into the **career fields** each planet governs and ranked (10th-house sign nudges matching fields).

13.2 Earning rating (three independent votes, averaged)

Vote	Source
KP earning strength	2nd/11th significators + 11th CSL Strong=3 / Good=2 / Moderate=1
Parashara wealth score	2nd & 11th lord placement, Jupiter/Venus dignity, Dhana yoga 3/2/1
Shadbala of wealth-givers	average ratio of 2nd lord, 11th lord, Jupiter, Venus 1.15 = 3, 0.9 = 2, else 1

combined = mean of the three **High / Good / Moderate** earning.

13.3 Satisfaction rating

$0.5 \times (5\text{th} \ \& \ 9\text{th} \ \text{lord alignment}) + 0.5 \times (\text{average dignity of the leading career planets})$. If 2 of the top career planets are **Ishta** in Shadbala, the note is upgraded. *High / Good / Variable*. This is the engine's reading of **meaning/contentment**, distinct from earning.

13.4 Job vs business (consensus of both systems)

- **KP:** 10th & 6th CSL linked to the **6th** service; to the **7th** business.
- **Parashara:** 10th sign nature, planets in the 10th, and 6th-lord vs 7th-lord strength.
- The two verdicts are **reconciled**: agreement that mode; KP-job + Parashara-business *"salaried start then independent venture"*; etc.

13.5 Influence summary

Parameter	Effect on the result
KP CSL of 2/6/10/11	Whether career & earning are promised ; job-vs-business mode
Planets in 10th, 10th lord	Strongest colour on the fields (weight 1.1)
D-10 strength & planets	Reinforce fields; can shift the ranking markedly
2nd/11th lords, Jupiter/Venus, Dhana yoga	Earning rating
5th/9th lords + career-planet dignity & Ishta	Satisfaction rating
Shadbala strength factor & strongest planet	Re-weights fields; strongest planet's periods highlighted

14. Best Periods overlay (KP windows × dasha phala × age)

`_best_periods(...)` answers "when are the best windows for education/career growth?" by **overlaying two layers**:

1. **KP fructification windows** — scan the 3-level dasha for periods where a **majority of the running MD/AD/PD lords are strong signifiers** of the relevant houses (education 4/9/11, career 2/10/11).
2. **Dasha-phala quality** — the Ishta/Kashta verdict of the Mahadasha running at that window.

Window quality	Meaning
Prime	Benefic dasha era and active signifiers
Favourable	Benefic dasha era
Workable	Signifiers active but the era needs effort

Age awareness

The native's **age** is taken into account: **career windows are only sought from working age (~16+)**, and every window is tagged with the age range and life-stage (Student years Early career Career building Career peak Senior Retirement). So a child's chart shows career windows beginning at 16, while education windows start now.

15. FAQ engine — verdicts & timelines

Eleven common questions are answered the way an astrologer would — a **verdict** from the KP promise cross-checked with Parashara, plus a **3-level dasha timeline**.

Area	FAQs	Fructification houses
Education	higher education, best study time, study abroad, competitive exams	4/9/11, 4/5/11, 9/12, 6/10/11
Career	when a job, government job, job vs business, promotion, career change, foreign career, income growth	6/10/11, 1/6/10, 7/10/11, 2/10/11, 9/10/6, 7/10/12, 2/11

Each timeline window is a precise **MD-AD-PD** band with start/end dates, chosen because a majority of those three running lords are signifiers of the question's houses.

16. Transit (Gochar) triggers

Dashas show what is *promised*; transits confirm when it *matures*. The engine reads the **slow planets** (Jupiter, Saturn, Rahu, Ketu) for the current date and reports:

- Which natal house each transits (from Lagna and from the Moon).
- The **Jupiter + Saturn "double transit"** over education (4/5/9) and career (10/6/11) houses — a classic trigger for major events.
- **Sade Sati** status of Saturn relative to the natal Moon.

17. Remedial suggestions

For the planets that **matter to the domain** (education karakas Mercury/Jupiter; career karakas Sun/Saturn/Mercury/Jupiter, plus the strong KP signifiers) and are **weak** (debilitated, enemy sign, or low dignity), a traditional, low-risk **upaya** is suggested: presiding deity, mantra, charity, fasting day, a gemstone caution, and a lifestyle measure. If all key planets are strong, a supportive measure for the lead karaka is offered instead.

18. The standalone browser edition

[docs/index.html](#) is a **single self-contained file** that runs the whole engine **client-side**:

- Planetary positions come from the **astronomy-engine** library (no data files); the same sidereal maths, ayanamsa model and Placidus algorithm are re-implemented in JavaScript.
- It was **validated against the Python/Swiss-Ephemeris build to 0.004°** on planet longitudes, with Placidus cusp signs matching exactly.
- The full KP + Parashara + Vimshottari + Varga + Shadbala + Bhava-Bala + best-periods logic is ported, so the browser report matches the server report (the only deliberate difference is the use of the **mean node** for Rahu/Ketu, which can shift a node's sub-lord slightly).
- City search uses a live geocoding lookup and computes the **DST-aware** timezone offset for the birth date.

19. Worked example & reproducibility

Reference birth: **15 Aug 1990, 10:30, New Delhi (28.61 N, 77.21 E, +5.5)**.

- **KP Lagna** Virgo (sub-lord Saturn); **Parashara Lagna** Virgo.
- **Shadbala** (rupas, strongest first): Mars 8.26, Sun 8.11, Jupiter 7.85, Mercury 7.50, Saturn 7.03, Moon 6.83, Venus 6.78 — all above their required minimum.
- Sanity checks that confirm the maths: exalted **Jupiter** **Uccha 59.8/60**; retrograde **Saturn** **Cheshta 60**; **Vara Bala** **Mercury 45** because 15 Aug 1990 was a **Wednesday**.

Run it yourself:

```
pip install -r requirements.txt
python -m astro_adviser.cli --name "Asha" --date 1990-08-15 --time 10:30 \
    --lat 28.6139 --lon 77.2090 --tz 5.5
python -m pytest # 74 tests covering every module above
```

The engine is fully **deterministic**: identical inputs always yield identical output, which is why the test-suite assertions (exact rupas, dasha boundaries, sub-lords) are stable.

20. Parameter influence — master summary

Parameter	Computed in	Primarily influences
Ayanamsa (KP vs Lahiri)	ephemeris	Sub-lords & cusp degrees all KP verdicts
Cuspal sub-lord (CSL)	kp	Whether education/career is promised; job vs business
KP four-step significators	kp	Field ranking + timing of every window
Planetary dignity	parashara	Academic strength, satisfaction, wealth
Yogas	parashara	Strength notes; Dhana earning, Raja status
D-9 / D-10 / D-24	varga/parashara	Reinforce streams/fields; vargottama strength
Shadbala (6 balas)	shadbala	Re-weights every planet (0.6–1.4×); earning vote
— speed & direction	shadbala (Cheshta)	Retrograde/slow planets gain motional strength
— declination	shadbala (Ayana)	North/south-preferring strength
Bhava Bala	shadbala	House-group strength (education 4/5/9, career 2/10/11)
Ishta / Kashta phala	shadbala	Satisfaction; dasha-period quality
Vimshottari dasha (3-level)	dasha	All timelines ; best-period windows
Native's age	adviser	Filters career windows to working age; life-stage tags
Transits	transits	Confirmation triggers for promised results

21. Limitations & disclaimer

- Shadbala has **minor school-to-school variations**; this implementation follows BPHS conventions with documented practical choices for sub-balas that need sunrise/ingress data.
- City timezone offsets in the browser use the IANA database (DST-aware); historical pre-1970 offsets may differ by minutes in rare cases.
- The browser edition uses the **mean lunar node**; the server uses the **true node**.
- This utility is intended for **guidance and self-reflection**. It is **not** a substitute for professional educational, career, financial, medical or legal advice.

Developed by Dr. Anil Sabaji · email: anilsabaji@gmail.com
